#### **DETAILED ACTION**

#### **Drawings**

The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on 13 June 2002 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by US 6,251,502, granted to Yasue et al. (hereafter Yasue).

Yasue discloses, referring to figure 1A, a printed circuit board comprising; a circuit pattern (5') formed on a surface of a base substrate (1), the surface at least comprising an insulative material; an insulative layer (3, 2) formed over the surface of

Application/Control Number: 09/537,083

Art Unit: 2827

said base substrate and including said circuit pattern, the insulative layer comprising a mixed insulative material of more than two kinds of organic resins having different etching rates during a dry etching process (see col. 6, line 25 - col. 10, line 60); a connection hole (8, 9) perforating said insulative layer; a conductive film (see col. 18, lines 10-20) forming an electroplating foundation, formed on the surface of said insulative layer after roughing the surface of said insulating layer and a conductive layer formed over said conductive film by an electroplating process (see col. 18, lines 15-25); wherein said conductive layer is connected with said conductor pattern.

### Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 6,217,987 Ono et al.,

US 6,403,221 Nakamura et al.,

US 6,411,519 Asai et al..

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeremy Norris whose telephone number is 703-306-5737. The examiner can normally be reached on Mon.-Th., 9AM - 6:30 PM and alt. Fri. 9AM-5:30PM.

Application/Control Number: 09/537,083
